## WALLS GOING VERTICAL ON MICROGRID INDUSTRY LEADER ELM'S NEW HQ AND MANUFACTURING FACILITY IN THE COLONY

The Colony, TX | Walls are up and construction is proceeding briskly at leading microgrid systems producer ELM MicroGrid's new 125,000-square-foot facility in The Colony, where it can continue to expand its energy storage and management capabilities for use across multiple sectors.

"Global interest and demand for renewable energy solutions have positioned ELM Companies for significant growth," said ELM's Chairman and founder, Lee C. Graves. "This expansion in Texas will allow us to meet the needs of our current and future clients for years to come."

ELM Microgrid specializes in the capture and storage of energy for use in commercial and industrial applications. [From helping a town in Puerto Rico harden its energy supply](#) to creating a microgrid EV charging solution for mega gas stations, battery energy storage systems from ELM MicroGrid have proven vital to improving global energy resiliency.

ELM's microgrid and solar operations currently are based in a 25,000 facility in Lewisville, with 35 engineering and manufacturing employees on-site. Both businesses, ELM Microgrid and ELM Solar, will make the move to The Colony once construction is complete later this year. This will create the need for approximately 65 additional manufacturing and engineering team members.

- MORE -

"The work of ELM's engineers and technicians are vital to energy resilience and cost savings for operations across multiple applications, said The Colony Mayor Richard Boyer. "We are very proud to welcome them to The Colony and we look forward to their future expansion and ongoing innovation."

### **About ELM Companies:**

Started in 1998, ELM Companies develops innovative and sophisticated solutions for energy and utility services that assure your compliance with regulations, improve your grid reliability, and streamline distribution.

Over the past 25 years, ELM has continuously built innovative technology solutions through our direct utilities experience and understanding with:

- 1000+ fleet servicing over 15,000 service tickets a day across the U.S. utility industry.
- MicroGrid energy storage solutions implemented for utility companies, the U.S. Military, and large enterprises.
- Precise, cloud-based utility mapping that provides instant access to your infrastructure data.
- Technology that offers the world's highest energy density solar equipment available on the market.
