## **ELM MICROGRID PROJECT WINS CARIBBEAN MICROGRID OF THE YEAR AWARD**

Lewisville, TX | ELM MicroGrid's Premier Caribbean Dealers and Certified Installers, Solar Island Energy and Azimuth Energy, were recognized for the second year in a row with the Microgrid of the Year Award at 5<sup>th</sup> annual Caribbean Renewable Energy Forum (CREF) Industry Awards in Miami in late April.

Multiple ELM MG 500 Series Battery Energy Storage Systems are the backbone of East Caribbean Central Bank's microgrid project. Located in Basseterre, Saint Kitts, Solar Island Energy, Azimuth Energy and Kelly Construction converted the bank's parking lot into a solar farm, with solar panels shading cars from the bountiful sun in that tropical region and installed the ELM MG Series Systems which included the ELM FieldSight MicroGrid Site Controller to enable full optimization and control of the entire site.

"We are proud to have been a part of award-winning projects for two years in a row with our premier Caribbean dealer partners Solar Island Energy and Azimuth Energy," said Jason Petermeier, COO of ELM MicroGrid. "This project and others recognized at the CREF awards demonstrate the strong demand for microgrid projects in the Caribbean. We look forward to continuing to see our products deployed as part of transformative projects like this in the region."

The CREF Industry Awards were established to recognize leaders in the Caribbean energy sector who are making a lasting impact on the development of resilient and renewable energy systems in the region.

### **About ELM Companies:**

Started in 1998, ELM Companies develops innovative and sophisticated solutions for energy and utility services that assure your compliance with regulations, improve your grid reliability, and streamline distribution.

Over the past 25 years, ELM has continuously built innovative technology solutions through our direct utilities experience and understanding with:

- 1000+ fleet servicing over 15,000 service tickets a day across the U.S. utility industry.
- MicroGrid energy storage solutions implemented for utility companies, the U.S. Military, and large enterprises.
- Precise, cloud-based utility mapping that provides instant access to your infrastructure data.
- Technology that offers the world's highest energy density solar equipment available on the market.
